The past looked like this: When I go out I have to bring my mask with me so that I don't get Covid.

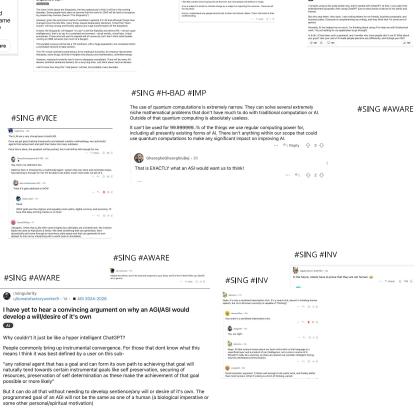

The future could look like this: If I don't bring my earplugs with me I won't be able to talk to

Imagining a future where everybody walks around and talks to the same intelligence would feel weird in some kind of way. Everyone would be talking to the "same" person, but the same person would have completely different features in another persons life. It would make me feel kind of connected to everybody, while also being insignificant.
